

Koken Inspection and Palpation of Breast Cancer Training Model II

Description

The model is made of soft silicone and feels very realistic. Lumps and skin changes typical of cancer symptoms can be realistically simulated with this model. It is not only an ideal educational model for nurses, students, doctors, and other paramedical personnel, but also provides an effective teaching tool for self-examination of breast cancer in mass screening. A storage case is included.

- Designed as a teaching aid for detecting breast cancer symptoms and for training women in self-examination
- Realistically simulates 5 lumps and 1 dimple typical of cancer
- 1 ½-year warranty
